

WOW™ Kiosk

ADVANCE SUSTAINABILITY

The WOW Kiosk is a turnkey solution for displaying the outreach and education component of WOW, sustainability management system. Deployed in high-traffic areas of a building the WOW Kiosk:

- Signals that an organization is committed to environmentally sustainable practices
- Provides a means to explain sustainability initiatives and demonstrate their effectiveness
- Offers building occupants and visitors a self-directed learning experience
- Helps building visitors engage with an organization the moment they enter a building
- Conveys organizational values and builds support for sustainability programs

DESCRIPTION

The WOW Kiosk is a free-standing touchscreen unit that invites building occupants and visitors to learn about an organization's sustainability practices. The unit consists of a 21.5-inch touchscreen mounted to a matte-black, powder-coated steel base. A colourful sign, laminated to the front face, invites passersby to consider the question, "How do we build a Sustainable Future?" The sleekly styled unit is designed to conform to ADA (Americans with Disabilities) guidelines and is UL listed.

The WOW Kiosk includes a preconfigured computer, securely enclosed behind the units locked front panel and a keyboard (for initial set-up), also secured behind the front panel. All that is required for immediate deployment are accessibility to a standard 120 volt wall plug and a wired internet connection. Shipped pre-assembled, the Kiosk is ready for installation the same day it arrives.

APPLICATIONS

The WOW Kiosk enables organizations to inform and educate stakeholders through an engaging touchscreen interface. By providing a positive self-directed learning experience, the WOW Kiosk supports an organization's efforts to influence the user-moderated behaviours that impact resource consumption. When situated in publicly accessible areas, the Kiosk also provides outreach and education, while at the same time demonstrating an organization's commitment to environmental responsibility.

Organizations at all stages of the greening process can use the WOW Kiosk to their advantage. For example, those in the early stages of developing sustainability programs can use the Kiosk to introduce and explain pending initiatives. As resource reduction programs are put in place and begin to take effect, the WOW Kiosk becomes the ideal medium to provide feedback on program results, thereby helping to sustain stakeholders' continued commitment to organizational goals.

Those organizations leading the shift to sustainable practices may choose to use multiple Kiosks to support educational building tours or open-house events.

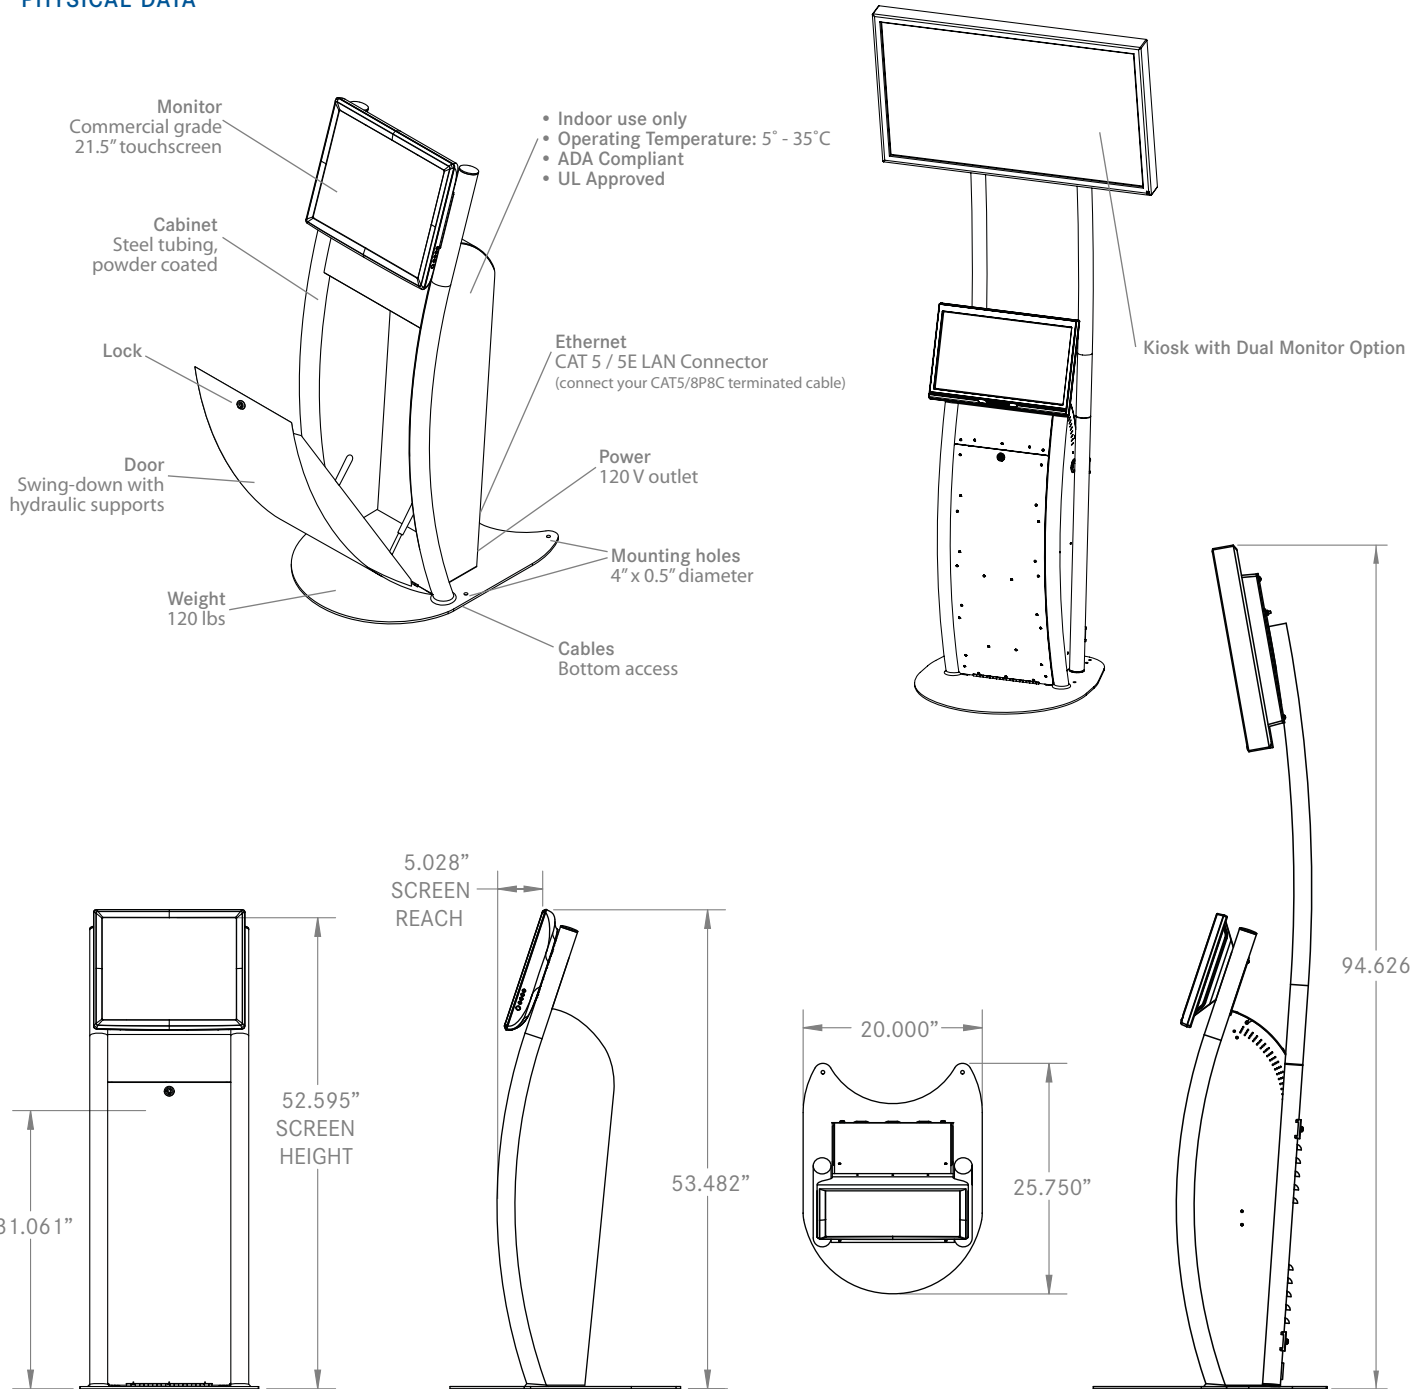

KEY FEATURES

The WOW kiosk touchscreen display.

- Free-standing, preassembled unit ready for same day deployment
- Includes all components required to plug and play WOW
- Publicizes and builds support for sustainability in an engaging interactive environment
- Provides tangible evidence of an organization's commitment to environmental sustainability
- Complies with all safety and accessibility regulations and guidelines
